Correction for 'Zeolitic imidazolate framework (ZIF-8) derived nanoporous carbon: the effect of carbonization temperature on the supercapacitor performance in an aqueous electrolyte' by Christine Young et al., *Phys. Chem. Chem. Phys.*, 2016, 18, 29308–29315.

The relative intensity ratios of the D band to the G band ( $I_D/I_G$ ) used in Fig. 1b are incorrect in the original article. The value of  $I_D/I_G$  increases from 0.40 to 0.91 as the temperature is increased from 700 °C to 1000 °C. There are no errors in the original text.

Fig. 1 (a) Wide-angle XRD patterns and (b) Raman spectra of nanoporous carbon obtained by heating the ZIF-8 particles at different temperatures. The  $I_D/I_G$  ratios for the samples are shown.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
