Correction: Optical property trends in a family of {Mo_6I_8} aquahydroxo complexes

Margarita V. Marchuk,[a] Natalya A. Vorotnikova,[a] Yuri A. Vorotnikov,*[a] Natalia V. Kuratieva,[a] Dmitri V. Stass[b,c] and Michael A. Shestopalov[a]

Correction for 'Optical property trends in a family of {Mo_6I_8} aquahydroxo complexes' by Margarita V. Marchuk *et al.*, *Dalton Trans.*, 2021, **50**, 8794–8802, https://doi.org/10.1039/D1DT01293B.

The authors regret an error in determining the band gap values of compounds **1-NO$_3$** and **1-OTs**. A revised version of Fig. 5 is shown below:

The obtained values correlate well with the absorption spectra, namely the E_g values increase with the protonation of two OH^- groups, ~1.65 eV (2) *vs.* ~1.87 eV (1).

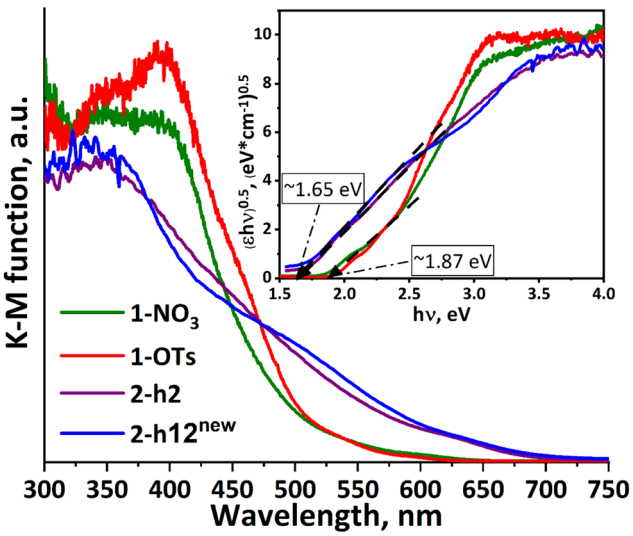

Fig. 5 Solid-state absorption spectra of **1-NO$_3$**, **1-OTs**, **2-h2**, and **2-h12^{new}** obtained by conversion of the corresponding diffuse reflectance spectra using the Kubelka–Munk function. Inset: estimation of the energy gaps *via* Tauc plots.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
