## Correction: Synthesis and electrochemistry of pseudocapacitive multilayer fullerenes and MnO<sub>2</sub> nanocomposites

Muniraj Vedi Kuyil Azhagan,<sup>a</sup> Mukta V. Vaishampayan<sup>a</sup> and Manjusha V. Shelke<sup>\*abc</sup>Correction for 'Synthesis and electrochemistry of pseudocapacitive multilayer fullerenes and MnO<sub>2</sub> nanocomposites' by V. K. Azhagan *et al.*, *J. Mater. Chem. A*, 2014, 2, 2152–2159.Equation 3 on Page 2157 should be as follows<sup>1</sup>

$$E = \frac{1}{8} C_s V^2 \cdot \frac{1}{3.6} \quad (3)$$

where  $C_s$  is the specific capacitance per electrode. Therefore, the corresponding sentence in the second column of page number 2157 should be "The maximum energy density obtained for CNO was 5.9 W h kg<sup>-1</sup> with power density of 100.2 W kg<sup>-1</sup> and the maximum power density was 4.16 kW kg<sup>-1</sup> with an energy density of 1.6 W h kg<sup>-1</sup>. In the case of the composite electrode a maximum power density of 2.25 kW kg<sup>-1</sup> was achieved at the energy density of 3.56 W h kg<sup>-1</sup> and the maximum energy density of 19.95 W h kg<sup>-1</sup> was achieved at the power density of 144.6 W kg<sup>-1</sup>."

The corresponding Fig. 5 on page 2158 should be as follows:

Fig. 5 Ragone plot of the full cell at different current densities (energy density vs. power density) for CNOs and the MnO<sub>2</sub>/CNOs composite.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
