Correction for 'A sniffer-camera for imaging of ethanol vaporization from wine: the effect of wine glass shape' by Takahiro Arakawa *et al.*, *Analyst*, 2015, DOI: 10.1039/c4an02390k.

Fig. 7 and 8 show incorrect captions; there are also errors in the text within the section 'Ethanol vapor imaging of different glass shapes'. For this section, the first two sentences of the second paragraph are not correct and should read as follows:

Fig. 6 shows the average intensity profiles at the center and edge of the wine glass at temperatures of 13 °C and 24 °C. Ethanol vapor from wine at 24 °C rapidly increased within 10 seconds regardless of the measurement point, whereas the intensity only gradually increased at 13 °C.

The correct versions of the captions for Fig. 7 and 8 are shown here below with their respective images.

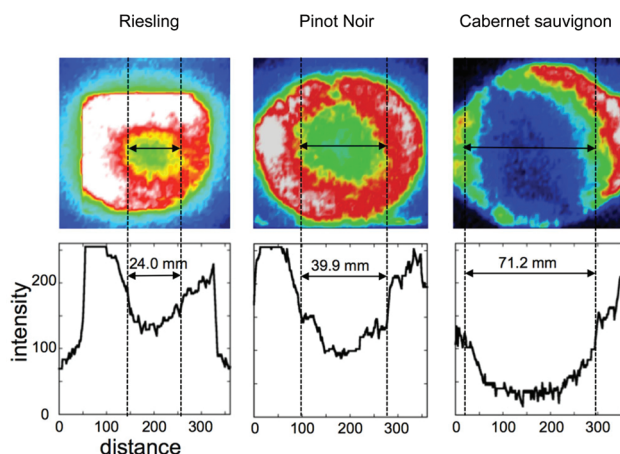

Fig. 7 Characteristic ring shapes of the three wine glass types: Riesling, Pinot Noir and Cabernet Sauvignon.
