Correction: Tap density equations of granular powders based on the rate process theory and the free volume concept

Tian Hao*

DOI: 10.1039/c5sm90032h

www.rsc.org/softmatter

Correction for 'Tap density equations of granular powders based on the rate process theory and the free volume concept' by Tian Hao et al., Soft Matter, 2015, DOI: 10.1039/c4sm02472a.

The authors regret the following errors in eqns (23), (24) and (26). The corrected equations are shown below.

The section on page 4

The energy flowing from the shaker to the powder³⁶ is:

$$E(t) = \frac{M_{\rm g}L_0\omega}{\pi} \tag{23}$$

where M_g is the weight of powder. The total energy flowing to the powder after a series of tapping processes with the tapping number, n, may be expressed as:

$$E = nE(t) = \frac{nM_g L_0 \omega}{\pi} \tag{24}$$

should be corrected to

The energy flowing rate from the shaker to the powder³⁶ is:

$$E(t) = \frac{MgL_0\omega}{2\pi} \tag{23}$$

where Mg is the weight of powder. The total energy flowing to the powder after a series of tapping processes with the tapping number, n, may be expressed as:

$$E = nE(t)t = nMgL_0 (24)$$

where *t* is the time spent for one tap.

The sentence on page 5

Substituting eqn (24) into eqn (25) yields:

$$k = A \exp\left[-\left(\frac{nMgL_0\omega}{\pi RT}\right)^{\beta}\right] = A \exp\left[-\left(\frac{n}{\tau}\right)^{\beta}\right]$$
 (26)

where τ is a constant of $\tau = \pi RT/(MgL_0\omega)$

should be corrected to

Substituting eqn (24) into eqn (25) yields:

$$k = A \exp\left[-\left(\frac{nMgL_0}{RT}\right)^{\beta}\right] = A \exp\left[-\left(\frac{n}{\tau}\right)^{\beta}\right]$$
 (26)

where τ is a constant of $\tau = RT/(MgL_0)$.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
