Correction for '*In situ* crosslinking of electrospun gelatin for improved fiber morphology retention and tunable degradation' by A. P. Kishan *et al.*, *J. Mater. Chem. B*, 2015, DOI: 10.1039/c5tb00937e.

Table 1 in the published article incorrectly indicates the statistical differences between percentage increases in fibre diameters for the 5× and 10× crosslinked meshes. A corrected version of Table 1 is shown below:

Mesh	Degree of crosslinking (%)	Increase in fiber diameter (%)
1×	$32 \pm 6^{+,\times}$	$170 \pm 13^{a,b}$
5×	$61 \pm 7^{+,*}$	9 ± 5^{a}
10×	$91 \pm 1^{\times,*}$	10 ± 4^{b}
Glutaraldehyde	57 ± 1	24 ± 9^{c}
5×	61 ± 7	9 ± 5^{c}

Statistically significant differences between samples ($p < 0.05$) are indicated by pairs of matching superscript symbols (+, ×, *, a, b, c).

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
