# Correction: Theory of solid effect and cross effect dynamic nuclear polarization with half-integer high-spin metal polarizing agents in rotating solids

Björn Corzilius

Correction for 'Theory of solid effect and cross effect dynamic nuclear polarization with half-integer high-spin metal polarizing agents in rotating solids' by Björn Corzilius *et al.*, *Phys. Chem. Chem. Phys.*, 2016, DOI: 10.1039/c6cp04621e.

In eqn (34), the rotational (MAS) frequency $\omega_r$ as proportionality factor between time and angle dependence of eigenenergy splitting $\Delta E$ as well as the reduced Planck's constant have been accidentally omitted; this mistake concerns only the display of the equation. The correct equation is:

$$P_{\mathrm{LAC}} \approx 1 - \exp\left(-\frac{h\omega_{\mathrm{eff}}^2(t)}{4\partial\Delta E(t)/\partial t}\right) = 1 - \exp\left(-\frac{h\omega_{\mathrm{eff}}^2(\rho)}{4\omega_r\partial\Delta E(\rho)/\partial\rho}\right) \tag{34}$$

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
