 Correction for 'Semiconducting quaternary chalcogenide glasses as new potential thermoelectric materials: an As–Ge–Se–Sb case' by A. Dahshan, *et al.*, *Dalton Trans.*, 2015, **44**, 14799–14804.

The authors regret that Table 1, Fig. 2 and Fig. 3 of the published version of the above paper are incorrect as the units reported in columns  $n_{\sigma}^a$ ,  $n_s^b$ ,  $\mu^a$  and  $\tau^a$  of the table did not account the effective electron mass ( $m^*$ ) and its unit in SI units.

**Table 1** Some electrical parameters as a function of Sb content for the  $\text{As}_{14}\text{Ge}_{14}\text{Se}_{72-x}\text{Sb}_x$  (where  $x = 3, 6, 9, 12$  and  $15$  at%) thin films

$x$	$\sigma^a \times 10^{-9}$ ( $\Omega \text{ m}$ ) <sup>-1</sup>	$\sigma_0 \times 10^3$ ( $\Omega \text{ m}$ ) <sup>-1</sup>	$S^b$ ( $\mu\text{V K}^{-1}$ )	$\Delta E$ (eV)	$\Delta E_s$ (eV)	$\delta$ (eV)	$n_{\sigma}^a \times 10^{12}$ (m <sup>-3</sup> )	$n_s^b \times 10^{14}$ (m <sup>-3</sup> )	$\mu^a \times 10^{-3}$ (m <sup>2</sup> V <sup>-1</sup> s <sup>-1</sup> )	$E_F$ (meV)	$\tau^a \times 10^{-14}$ (s)
3	1.14	7.76	855.2	0.765	0.620	0.145	3.68	1.539	1.93	9.75	1.09

**Fig. 3** Free carrier concentration ( $n_e$ ) obtained from electrical conductivity as a function of temperature ( $T$ ) for  $\text{As}_{14}\text{Ge}_{14}\text{Se}_{72-x}\text{Sb}_x$  (where  $x = 3, 6, 9, 12$  and  $15$  at%) thin films.

The unit of electron mass was taken in gram while others are in SI units. This has affected the magnitude of data although there is no effect on the nature of data plots or overall trends in the data reported. There are no changes to the conclusions of the paper. The authors would like to apologise for any inconvenience caused.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
