## Correction: Sustained anti-BCR–ABL activity with pH responsive imatinib mesylate loaded PCL nanoparticles in CML cells

 Barbara Cortese,<sup>ab</sup> Stefania D'Amone,<sup>a</sup> Giuseppe Gigli<sup>acd</sup> and Ilaria Elena Palamà<sup>\*a</sup>

 Correction for 'Sustained anti-BCR–ABL activity with pH responsive imatinib mesylate loaded PCL nanoparticles in CML cells' by Barbara Cortese *et al.*, *Med. Chem. Commun.*, 2015, 6, 212–221.

The authors regret their oversight in not referencing their closely related work, previously published in *Biomaterials Science*, in this *MedChemComm* paper. For the benefit of readers the reference is provided below.\*

This *MedChemComm* paper presents a comprehensive study of the synthesis of the reported PCL nanoparticles, pH release of the loaded drug, the colocalization of the nanoparticles in cells, and *in vitro* evidence that the drug release was active against a specific molecular target, the oncoprotein BCR–ABL.

The *Biomaterials Science* paper reports the combination of these PCL nanoparticles with polyelectrolyte nanocomplexes for the dual delivery of two drugs, imatinib mesylate and doxorubicin.
