Retraction: Identifying the inhibitory mechanism of apigenin on the insulin ligand-receptor binding

Yong Yang

DOI: 10.1039/c6md90032a

Retraction of 'Identifying the inhibitory mechanism of apigenin on the insulin ligand-receptor binding' by Yong Yang, *Med. Chem. Commun.*, 2015, **6**, 1190–1195.

www.rsc.org/medchemcomm

I, the named author, hereby wholly retract this MedChemComm article due to extensive text and data overlap with a previous publication that I co-authored.¹

Fig. 1b–d, 2b–d, 3a and 3b in this *MedChemComm* paper were copied from ref. 1 and do not represent results from experiments with apigenin.

This retraction supersedes the information provided in the Expression of Concern related to this article.

Signed: Yong Yang, 22nd June 2016.

Retraction endorsed by Richard Kelly, Executive Editor, MedChemComm.

1. Quercetin suppresses insulin receptor signaling through inhibition of the insulin ligand-receptor binding and therefore impairs cancer cell proliferation, Feng Wang and Yong Yang, *Biochem. Biophys. Res. Commun.*, 2014, 452, 1028–1033.
