Correction: Understanding and controlling the release mechanism of *Escherichia coli* in double W₁/O/W₂ emulsion globules in the presence of NaCl in the W₂ phase

Hani El Kadri,^a Tim Overton,^{ab} Serafim Bakalis^a and Konstantinos Gkatzionis^{*ab}

Correction for 'Understanding and controlling the release mechanism of *Escherichia coli* in double W₁/O/W₂ emulsion globules in the presence of NaCl in the W₂ phase' by Hani El Kadri et al., RSC Adv., 2015, 5, 105098–105110.

The authors regret that in the original article the second paragraph of Section 3.5 contains errors, which could lead to potential scientific misinterpretation of the text. Therefore, the sentence "There was no significant difference in the *D* (4, 3) with NaCl compared to without NaCl in W₂." should be replaced by "There was a significant difference in the *D* (4, 3) with NaCl compared to without NaCl in W₂."

The authors would also like to add that a number of figure citations in the original article are incorrect; these are listed with the appropriate changes below.

"Fig. 2a and b show snapshots taken after adding NaCl to W₂ of W₁/O/W₂ emulsion made with 40% W₁ and 1% Tween80 (see ESI, Video S1 and S2 respectively)." should instead include citations to Fig. 1a and b.

"Fig. 2c shows snapshots taken after adding NaCl to W₂ of W₁/O/W₂ emulsion made with 20% W₁ and 5% Tween80 (see ESI, Video S3)." should instead include a citation to Fig. 1c.

"The loss of cream layer thickness was significantly (*P* < 0.05) increased at 40% W₁ and 1% Tween80 with NaCl compared to without NaCl in W₂ (Fig. 7, 8, 9A and B) but was significantly similar over the varying concentrations of NaCl (Fig. 4)." should instead include citations to (Fig. 7, 9A and B) and then (Fig. 7) respectively.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
