Correction: Double-emulsion drops with ultra-thin shells for capsule templates

Shin-Hyun Kim, Jin Woong Kim, Jun-Cheol Cho and David A. Weitz

In the section “Diameter and shell thickness of double-emulsion drops” there are errors in eqn (2) and in the sentence that begins “In the same fashion, we calculate the thickness of the middle layer of double-emulsion drops which are produced at each values of $Q_2/Q_1$ and plot the results in Fig. 3c”. The equation should be

$$\frac{L}{R} = 1 - \left(1 + \frac{Q_1}{Q_2}\right)^{-13}.$$ 

The sentence should read “In the same fashion, we calculate the thickness of the middle layer of double-emulsion drops which are produced at each values of $Q_2/Q_1$ and plot the results in Fig. 3c”.

In the caption for Fig. 3c, “Relative thickness of shell to radius of the double-emulsion drops ($t/R$) as a function of $Q_1/Q_2$” should read “Relative thickness of shell to radius of the double-emulsion drops ($t/R$) as a function of $Q_2/Q_1$.” In addition, the x-axis is incorrectly labelled with “$Q_1/Q_2$”. The x-axis should be “$Q_2/Q_1$”. A corrected version of Fig. 3c is shown.

![Fig. 3](image-url)  

(c) Relative thickness of shell to radius of the double-emulsion drops ($t/R$) as a function of $Q_2/Q_1$.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
