Correction: Hierarchically porous polystyrene membranes fabricated via a CO₂-expanded liquid selective swelling and in situ hyper-cross-linking method

Haozong Wang,¹ Hua Bai¹ and Lei Li*¹²

Correction for ‘Hierarchically porous polystyrene membranes fabricated via a CO₂-expanded liquid selective swelling and in situ hyper-cross-linking method’ by Haozong Wang et al., RSC Adv., 2015, 5, 68639–68645.

In the original article, the data presented in Fig. 4 and 5b of the main article and in Fig. S2 of the ESI were not collected for the material presented in this paper. For this reason, revised versions of Fig. 4 and 5b that correspond to the material presented in this paper are included herein. A new ESI file that contains a correspondingly updated Fig. S2 has been uploaded for the original article; this replaces the version originally uploaded on 12th August 2015.

Fig. 4  Solid-state NMR spectrum of the hyper-cross-linked PS membrane.

Additionally, the last sentence of the Results and discussion section should be changed as follows (the changes are in bold for clarity):

“The residual weight of the hyper-cross-linked PS membrane at 550 °C is **28.5%, much higher than that of the uncross-linked membrane**.”

In the Materials and methods section entitled ‘Hierarchically porous polymeric membranes via hyper-crosslinking’, “FeCl₃ (1.625 g, 0.005 mol)” should be corrected to “FeCl₃ (1.625 g, 0.01 mol)”.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
