Correction: Development of glycosynthases with broad glycan specificity for the efficient glyco-remodeling of antibodies

Sachin S. Shivatare,[a] Lin-Ya Huang,[a] Yi-Fang Zeng,[a] Jung-Yu Liao,[a] Tsai-Hong You,[a] Shi-Yun Wang,[a] Ting Cheng,[b] Chih-Wei Chiu,[a] Ping Chao,[a] Li-Tzu Chen,[a] Tsung-I Tsai,[c] Chiu-Chen Huang,[a] Chung-Yi Wu,*[b] Nan-Horng Lin*[a] and Chi-Huey Wong*[bc]

Correction for 'Development of glycosynthases with broad glycan specificity for the efficient glyco-remodeling of antibodies' by Sachin S. Shivatare *et al.*, *Chem. Commun.*, 2018, **54**, 6161–6164.

The authors regret that there was an error in Fig. 3 in the original manuscript. The value for the FcγIIIA binding of Rtx-G16 in Fig. 3 was given as 5.4 but should be 33. The corrected version of Fig. 3 is presented below. There was also an error in the original caption. The last sentence in the caption referred to "maximal FcγIIA binding". This should have read "maximal FcγIIIA binding".

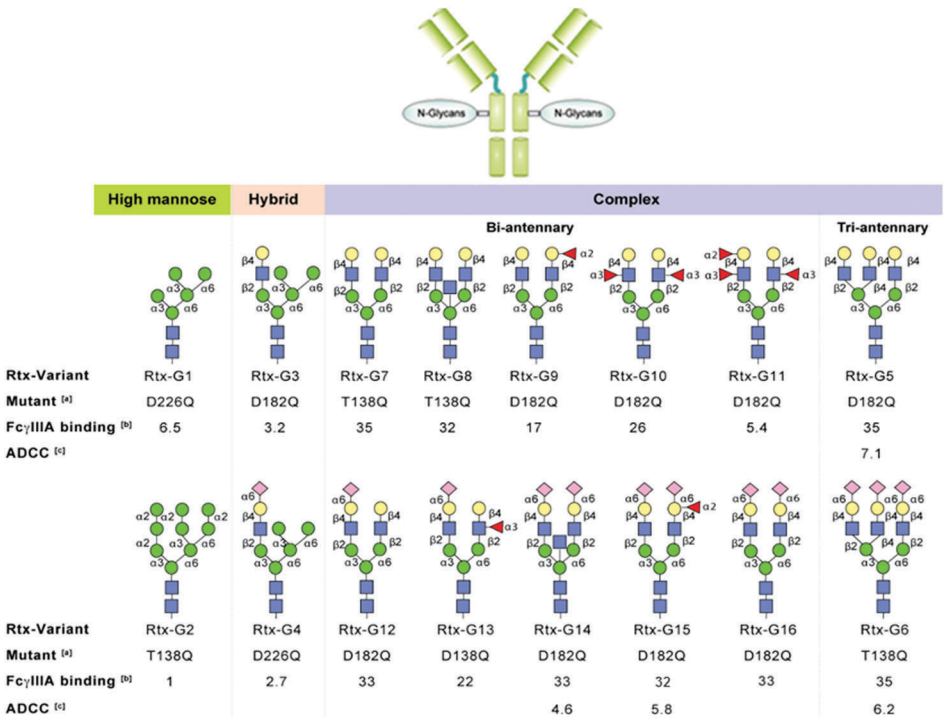

Fig. 3 Rtx-variants generated *via* Fc-glycosylation using Rtx-N as an acceptor and various glycan oxazolines as donors. (a) EndoS2 mutant required. (b) Binding between FcγRIIIA and Rtx-variants. Fold of enhancement of EC_{50} compared to commercial Rtx. (c) ADCC activities of selected Rtx-variants. Fold of enhancement of EC_{50} compared to commercial Rtx. EC_{50} in ng mL^{-1} refers to the concentration of an antibody that gives 50% of the maximal FcγIIIA binding or maximal cell killing.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
