## Correction: Development of glycosynthases with broad glycan specificity for the efficient glyco-remodeling of antibodies

Sachin S. Shivate, <sup>a</sup> Lin-Ya Huang, <sup>a</sup> Yi-Fang Zeng, <sup>a</sup> Jung-Yu Liao, <sup>a</sup> Tsai-Hong You, <sup>a</sup> Shi-Yun Wang, <sup>a</sup> Ting Cheng, <sup>b</sup> Chih-Wei Chiu, <sup>a</sup> Ping Chao, <sup>a</sup> Li-Tzu Chen, <sup>a</sup> Tsung-I Tsai, <sup>c</sup> Chiu-Chen Huang, <sup>a</sup> Chung-Yi Wu, <sup>\*b</sup> Nan-Horng Lin<sup>\*a</sup> and Chi-Huey Wong<sup>\*bc</sup>

Correction for 'Development of glycosynthases with broad glycan specificity for the efficient glyco-remodeling of antibodies' by Sachin S. Shivate et al., *Chem. Commun.*, 2018, **54**, 6161–6164.

The authors regret that there was an error in Fig. 3 in the original manuscript. The value for the Fc<sub>γ</sub>IIIA binding of Rtx-G16 in Fig. 3 was given as 5.4 but should be 33. The corrected version of Fig. 3 is presented below. There was also an error in the original caption. The last sentence in the caption referred to "maximal Fc<sub>γ</sub>IIA binding". This should have read "maximal Fc<sub>γ</sub>IIIA binding".

**Fig. 3** Rtx-variants generated via Fc-glycosylation using Rtx-N as an acceptor and various glycan oxazolines as donors. (a) EndoS2 mutant required. (b) Binding between Fc<sub>γ</sub>IIIA and Rtx-variants. Fold of enhancement of EC<sub>50</sub> compared to commercial Rtx. (c) ADCC activities of selected Rtx-variants. Fold of enhancement of EC<sub>50</sub> compared to commercial Rtx. EC<sub>50</sub> in ng mL<sup>-1</sup> refers to the concentration of an antibody that gives 50% of the maximal Fc<sub>γ</sub>IIIA binding or maximal cell killing.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
