## Correction: CuAAC click chemistry for the enhanced detection of novel alkyne-based natural product toxins

Edward S. Hems, Ben A. Wagstaff, Gerhard Saalbach and Robert A. Field\*

DOI: 10.1039/c8cc90504e

Correction for 'CuAAC click chemistry for the enhanced detection of novel alkyne-based natural product toxins' by Edward S. Hems *et al.*, *Chem. Commun.*, 2018, **54**, 12234–12237.

[rsc.li/chemcomm](http://rsc.li/chemcomm)

The authors regret that Table 1 was displayed incorrectly in the original article. The correct version is shown below.

**Table 1** Pymnesium strains and corresponding HRMS identification of 8 pymnesin compounds, including pymnesin-A1 and -A2 originally reported by Igarashi *et al.*,<sup>8,9</sup> based on MS/HRMS and subsequent labelling with 3-azido-7-hydroxycoumarin (**3**). Masses reported correspond to  $[M + 2H]^{2+}$  ion, unless denoted with a '\*' which reports the  $[M + Na + H]^{2+}$  ion. Toxins that share the same backbone only have 1 value reported for the clicked aglycone, which is an average signal for the aglycone from all toxins

Strain	Pymnesin-type	Elemental composition of aglycone	$[M\text{-glycone} + 2H]^{2+}$	Elemental composition	$[M + 2H]^{2+}$ $[M + Na + H]^{2+}$ *	Elemental composition of 'clicked' toxin (aglycone)	$[M\text{-glycone} + \text{azido-coumarin} + 2H]^{2+}$
