Correction: CuAAC click chemistry for the enhanced detection of novel alkyne-based natural product toxins

Edward S. Hems, Ben A. Wagstaff, Gerhard Saalbach and Robert A. Field*

DOI: 10.1039/c8cc90504e

Correction for 'CuAAC click chemistry for the enhanced detection of novel alkyne-based natural product toxins' by Edward S. Hems et al., Chem. Commun., 2018, 54, 12234-12237.

The authors regret that Table 1 was displayed incorrectly in the original article. The correct version is shown below.

Table 1 Prymnesium strains and corresponding HRMS identification of 8 prymnesin compounds, including prymnesin-A1 and -A2 originally reported by Igarashi et al., $^{8.9}$ based on MS/HRMS and subsequent labelling with 3-azido-7-hydroxycoumarin (3). Masses reported correspond to $[M + 2H]^{2+}$ ion, unless denoted with a '*' which reports the $[M + Na + H]^{2+}$ ion. Toxins that share the same backbone only have 1 value reported for the clicked aglycone, which is an average signal for the aglycone from all toxins

Strain	Prymnesin- type	Elemental composition of aglycone	[M-glycone + 2H] ²⁺	Elemental composition	$[M + 2H]^{2+}$ $[M + Na + H]^{2+*}$	Elemental composition of 'clicked' toxin (aglycone)	[M-glycone + azido- coumarin + 2H] ²⁺
