## Correction: Geobacter sulfurreducens pili support ohmic electronic conduction in aqueous solution

Nicole L. Ing,<sup>a</sup> Tyler D. Nusca<sup>a</sup> and Allon I. Hochbaum\*<sup>ab</sup>

Correction for 'Geobacter sulfurreducens pili support ohmic electronic conduction in aqueous solution' by Nicole L. Ing et al., Phys. Chem. Chem. Phys., 2017, 19, 21791–21799.

DOI: 10.1039/c7cp90275a

rsc.li/pccp

The range of values in the Y-axes labels of Fig. 4 panels A  $(I_{DS})$  and B  $(\ln[G])$  were incorrect in the published version of this manuscript. The correct axis labels for both panels are as shown below.

Fig. 4 Electronic transport in purified *G. sulfurreducens* pili in aqueous buffered conditions. (A) Electrochemical transfer characteristics of the pili film, at different  $V_{DS}$  values according to the color scale at the right, in phosphate–citrate buffer at pH 7.0. (B) Temperature-dependent conductance (*G*) of the pili film at  $V_{DS} = 60$  mV and  $V_{S} = 0$  vs. Ag/AgCl in phosphate–citrate buffer pH 7.0. Dashed red and blue lines indicate linear regimes in the Arrhenius plot above and below room temperature ( $1000/T = 3.39 \text{ K}^{-1}$ ), respectively. Electrode spacing = 5  $\mu$ m.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
