Correction: Improved fill factor in inverted planar perovskite solar cells with zirconium acetate as the hole-and-ion-blocking layer

Xuwen Zhang, Chunjun Liang,* Mengjie Sun, Huimin Zhang, Chao Ji, Zebang Guo, Yajun Xu, Fulin Sun, Qi Song and Zhiquan He*

Correction for 'Improved fill factor in inverted planar perovskite solar cells with zirconium acetate as the hole-and-ion-blocking layer' by Xuwen Zhang *et al.*, *Phys. Chem. Chem. Phys.*, 2018, 20, 7395–7400.

The authors would like to correct the name of the chemical material investigated in the work from zirconium acetate to zirconium(IV) acetylacetonate, which results in the following changes:

- (1) The title of the article should be corrected as "Improved fill factor in inverted planar perovskite solar cells with zirconium(IV) acetylacetonate as the hole-and-ion-blocking layer".
- (2) In the abstract, the sentence "In this work, we used a new buffer layer, zirconium acetate ($\text{Zr}(\text{Ac})_4$)." should be amended to "In this work, we used a new buffer layer, zirconium(IV) acetylacetonate ($\text{Zr}(\text{Acac})_4$)."
- (3) $\text{Zr}(\text{Ac})_4$ should be changed to $\text{Zr}(\text{Acac})_4$ throughout the article.
- (4) Fig. 1 should be replaced with the amended figure below showing the correct chemical structure of zirconium(IV) acetylacetonate.

Fig. 1 (a) The architecture of p-i-n perovskite solar cell with $\text{Zr}(\text{Acac})_4$ layer. (b) Energy diagram of the device. UPS spectra of $\text{Zr}(\text{Acac})_4$ at the secondary electron cutoff (E_{cutoff}) edge (c) and at the onset energy boundary (d).

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
