Correction for 'Impact of water quality parameters on bacteria inactivation by low-voltage electroporation: mechanism and control' by Zheng-Yang Huo *et al.*, *Environ. Sci.: Water Res. Technol.*, 2018, DOI: 10.1039/c8ew00041g.

In the third paragraph of the introduction, the units of the normal saline solution should be 9 g L^{-1} instead of 9 mg L^{-1} . The sentence should read:

“However, all of the EDC treatments were performed using a relatively pure aquatic matrix of normal saline solution (9 g L^{-1} sodium chloride), which is not representative of natural waters.”

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
