Correction for 'Effects of UV-B radiation on the infectivity of *Magnaporthe oryzae* and rice disease-resistant physiology in Yuanyang terraces' by Xiang Li *et al.*, *Photochem. Photobiol. Sci.*, 2018, **17**, 8–17.

In the published article the equation to calculate the disease index (DI) of rice blast was incomplete, the corrected equation is shown below as used to obtain the DI values reported in the paper which remain unaltered.

$$DI = \left\{ \left[\sum (\text{disease level leaf number} \times \text{representative value}) \right] / \text{total leaf number} \times \text{heavy disease representative value} \right\} \times 100\%$$

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
