Correction for 'A study on a telo21 G-quadruplex DNA specific binding ligand: enhancing the molecular recognition ability via the amino group interactions' by Dongli Li *et al.*, *RSC Adv.*, 2018, 8, 20222–20227.

The authors regret that ds26, telo21 and RNA were labelled incorrectly in Fig. 2 in the original manuscript. The corrected Fig. 2 is displayed below.

Fig. 2 (A) A comparison of side group effects of the binding ligand: 1 R = N(CH₃)₂ and 2 R = SCH₃ in the recognition and sensing of different nucleic acids including single-stand DNA dA21, duplex DNA ds26, G-quadruplex DNA telo21, and RNA. The concentration of the ligand was fixed at 5 μM.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
