Correction for '*In situ* synthesis of a silicon flake/nitrogen-doped graphene-like carbon composite from organoclay for high-performance lithium-ion battery anodes' by Qingze Chen *et al.*, *Chem. Commun.*, 2019, **55**, 2644–2647.

This communication contains an incorrect version of Fig. 5 (a duplicate of Fig. 4) that was inadvertently introduced during the production process. The correct version of Fig. 5 appears below with an unchanged caption from the original.

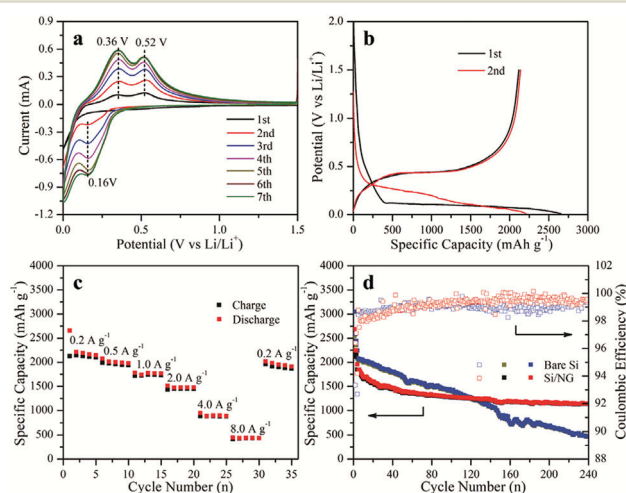

Fig. 5 Electrochemical performance of the Si/NG electrodes. (a) Cyclic voltammetry curves at a scan rate of 0.1 mV s⁻¹ in the voltage range of 0.001–1.5 V (vs. Li/Li⁺); (b) discharge–charge curves at a current density of 0.2 A g⁻¹ between 0.001 and 1.5 V (vs. Li/Li⁺); (c) rate capability at various current densities from 0.2 to 8.0 A g⁻¹; (d) comparative cycling performance of the Si/NG and bare Si electrodes at current densities of 0.2 A g⁻¹ for the initial three cycles and 1.0 A g⁻¹ for the remaining cycles.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
