Correction for '4'-Guanidinium-modified siRNA: a molecular tool to control RNAi activity through RISC priming and selective antisense strand loading by Ganesh N. Nawale et al., Chem. Commun., 2019, 55, 9112-9115

The authors regret that Table 1 was displayed incorrectly in the original article. The correct version is shown below.

Table 1	The sequences	of siRNA du	uplexes and	T_m values

Name	Passenger (5'-3', above) and guide strand (3'-5', below)	$T_{ m m}{}^a$	$\Delta T_{ m m}{}^b/{ m mod.}$

 $[^]a$ $T_{
m m}$ represents melting temperatures for unmodified and GMU modified siRNA duplexes (bold text indicates modification) in $^{\circ}$ C. b $\Delta T_{
m m}$ represents the $[T_{\rm m}$ (RNA mod.) $-T_{\rm m}$ (RNA unmod.)]. The $T_{\rm m}$ values were determined using 1 μ M of siRNA in buffer containing 50 mM NaCl, 10 mM Na_2PO_4 , pH 7.4. All experiments were triplicated, and the T_m values have reported an average of 3 measurements with the estimated standard deviation.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
