Correction for 'The environmental biorefinery: state-of-the-art on the production of hydrogen and value-added biomolecules in mixed-culture fermentation' by Roman Moscoviz *et al.*, *Green Chem.*, 2018, **20**, 3159–3179.

The authors wish to point out one error in the article:

The feed-in tariff for methane injection in France is 0.69–1.93 € kg⁻¹ and not 0.09–0.20 € kg⁻¹ (Table 4), which corresponds to 0.17–0.48 € kg_{COD}⁻¹. As these prices are in the range of H₂ market prices (0.19–0.63 € kg_{COD}⁻¹), the discussion in section 4.1 regarding the improved profitability of a two-stage anaerobic digestion process for H₂ and CH₄ production is no longer valid for a country with high feed-in tariffs such as France.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
