Correction for 'Enantioselective, convergent synthesis of the ineleganolide core by a tandem annulation cascade' by Robert A. Craig II *et al.*, *Chem. Sci.*, 2017, **8**, 507–514.

Since publication of the original manuscript, the authors have carried out some additional research and can now unambiguously confirm the reassignment of a few late-stage, intermediate compounds that were incorrectly assigned in the original manuscript. Specifically, they have obtained an X-ray structure of the product of Amberlyst® treatment of the mixture of compounds 32 and S2 and the product obtained is epimeric at C7. To avoid confusion, this new product is called product *ent-12A*. An updated and corrected Scheme 5 is provided below.

Additional Supplementary Information is provided, containing details of the newly solved X-ray crystal structure.

For a complete discussion, please see the authors' recently published account of their research program toward the enantioselective synthesis of ineleganolide.¹
