Correction: Identification of selective protein–protein interaction inhibitors using efficient *in silico* peptide-directed ligand design†

Andrew M. Beekman,*a Marco M. D. Cominetti,a Samuel J. Walpole,a Saurabh Prabhu,a Maria A. O’Connell,a Jesus Anguloa and Mark Searcey*ab

The authors regret that the structures of compounds 2, 3, 10 and 11 are incorrect in the original article. The correct structures are presented in the updated version of Table 1 below.

The original ESI was replaced by a correspondingly revised version on 1st May 2019 to reflect these changes.

Table 1 IC$_{50}$ values for inhibition of the binding of FAM-p4 to hDM2 and hDMX of small molecules.$^{a}$ A green background indicates the compound was designed for and was selective to the same protein. Yellow indicates the compound is a dual inhibitor. A red background indicates the compound was designed for one protein but was selective for the other protein.

$^{a}$ IC$_{50}$ values determined by non-linear regression of at least three independent experiments (see ESI, pg 10). Errors are 95% confidence intervals (CI). Fmoc, 9-fluorenymethylcarbonyl.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
