Correction for 'Effects of LiBOB on salt solubility and BiF_3 electrode electrochemical properties in fluoride shuttle batteries' by Asuman Celik Kucuk *et al.*, *J. Mater. Chem. A*, 2019, **7**, 8559–8567.

The authors regret errors in the legends of Fig. 5 and 7 in the published article (in which the BiF_3 phase was incorrectly labelled as orthorhombic and hexagonal). In addition, on pages 8564 and 8565 of the published article, the phrase 'orthorhombic BiF_3' should instead have read 'cubic BiF_3', and on page 8565 of the published article, the phrase 'hexagonal phase' should instead have read 'cubic phase'. Corrected versions of Fig. 5 and 7 are provided below.

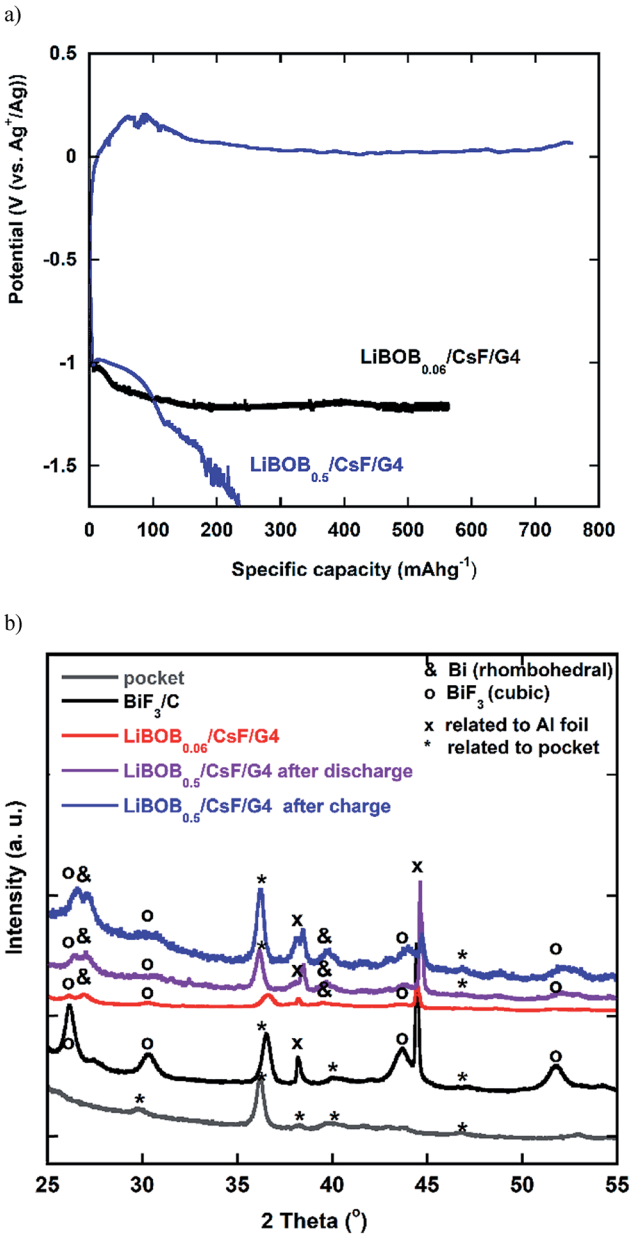

Fig. 5 (a) Potential profiles of BiF_3/C nanocomposite electrodes in $LiBOB_{0.06}$/CsF/G4 and $LiBOB_{0.5}$/CsF/G4 at room temperature and 1/40C rate (discharging cutoff voltage: −1.6 V; charging cutoff voltage: 0.5 V). (b) X-ray diffraction patterns of BiF_3/C in the pristine, fully discharged, and fully charged states of $LiBOB_{0.5}$/CsF/G4. (LiBOB: lithium bis(oxalato)borate; G4: tetraglyme).

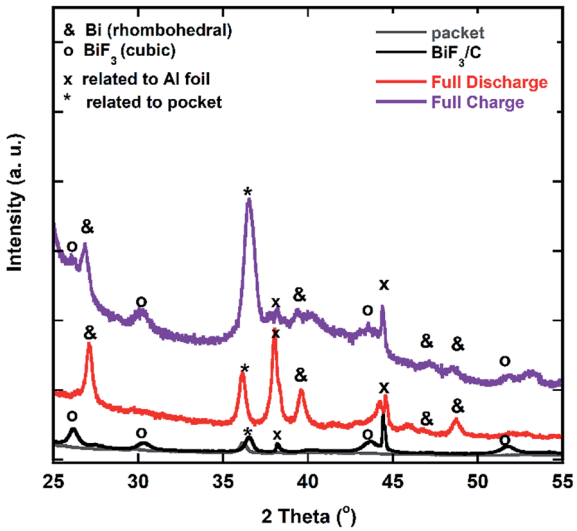

Fig. 7 X-ray diffraction patterns of BiF_3/C nanocomposite electrodes in the pristine, fully discharged, and fully charged states of $LiBOB_{0.25}$/CsF/G4 (LiBOB: lithium bis(oxalato)borate; G4: tetraglyme). Discharge cutoff voltage is −1.6 V.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
