Correction for 'Development of a bidirectional isothermal amplification strategy for the sensitive detection of transcription factors in cancer cells' by Yan Zhang *et al.*, *Chem. Commun.*, 2020, **56**, 8952–8955, DOI: 10.1039/D0CC03134H.

We regret that an incorrect version of Fig. 3 was published in the original manuscript. The corrected Fig. 3 is shown below with unchanged legend.

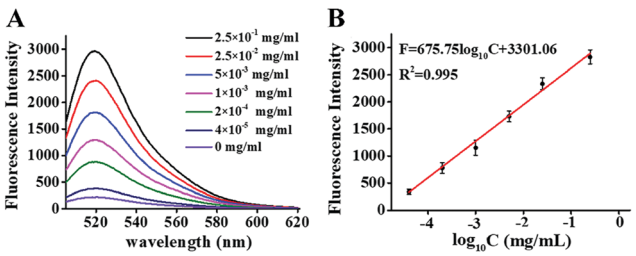

Fig. 3 (A) Fluorescence emission spectra in response to different concentrations of nuclear extracts. (B) Linear relationship between the fluorescence intensity at 521 nm and the logarithm of nuclear extract concentration in the range from $4 \times 10^{-5}$ to $2.5 \times 10^{-1}$ mg mL$^{-1}$. The 500 nM TF-binding probes and 20 ng mL$^{-1}$ TNF-a were used in the experiments. Error bars show the standard deviation of three independent experiments.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
