Correction: The challenges of glycan recognition with natural and artificial receptors

Stefano Tommasone, a Francia Allabush, a Yazmin K. Tagger, a Joshua Norman, a Monika Köpf, a James H. R. Tucker b and Paula M. Mendes* a

The authors regret that incorrect structures for heparosan, chondroitin sulfate and peptidoglycans were included in Fig. 1 of the original article. The correct structures are included in the corrected version of Fig. 1 below.

Fig. 1 Examples of glycans that can be found in nature, ranging from glycosaminoglycan polysaccharides to glycoconjugates such as peptidoglycans, glycolipids and glycoproteins, which can bear tumour-associated antigens.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
