Correction: The challenges of glycan recognition with natural and artificial receptors

Stefano Tommasone, Francia Alabash, Yazmin K. Tagger, Joshua Norman, Monika Köpf, James H. R. Tucker and Paula M. Mendes*

The authors regret that incorrect structures for heparosan, chondroitin sulfate and peptidoglycans were included in Fig. 1 of the original article. The correct structures are included in the corrected version of Fig. 1 below.

Fig. 1  Examples of glycans that can be found in nature, ranging from glycosaminoglycan polysaccharides to glycoconjugates such as peptidoglycans, glycolipids and glycoproteins, which can bear tumour-associated antigens.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
