## Retraction: Determination of chemical affinity of graphene oxide nanosheets with radionuclides investigated by macroscopic, spectroscopic and modeling techniques

Congcong Ding,<sup>a</sup> Wencai Cheng,<sup>b</sup> Yubing Sun\*<sup>a</sup> and Xiangke Wang<sup>a</sup>

DOI: 10.1039/d0dt90074e

Retraction of 'Determination of chemical affinity of graphene oxide nanosheets with radionuclides investigated by macroscopic, spectroscopic and modeling techniques' by Congcong Ding et al., Dalton Trans., 2014, **43**, 3888–3896.

The Royal Society of Chemistry, with the agreement of the authors, hereby wholly retracts this *Dalton Transactions* article due to concerns with the reliability of the data in the published article.

Repeating fragments can be observed in the XPS spectrum for GO-U2 in Fig. 7D, which indicates that it has been manipulated.

Given the significance of the concern about the validity of the data, the findings presented in this paper are no longer reliable.
