Correction for 'Spruce milled wood lignin: linear, branched or cross-linked?' by Mikhail Balakshin et al., Green Chem., 2020, 22, 3985–4001, DOI: 10.1039/DOGC00926A.

Following publication of this manuscript, the authors note the following errors:

In Fig. 9, unit 22' should contain a hydroxyl group at the  $\gamma$  position and not an aldehyde. Unit 21" should have a CH<sub>2</sub> group at the  $\alpha$  position and not a carbonyl.

The corrected figure is as given in this Correction.

Fig. 9 Tentative quantitative structural model of spruce MWL, in agreement with currently available structural data on lignin moieties and their occurrence frequencies. Dashed bond: different structures agreeing with available information; the exact structure of the Alk-O-Alk moieties (units 2–9, 3–12, 13–14) is not well defined, therefore the model indicates a general type of units rather than insisting on a precise structure. Minor structures (below 4/100 Ar) are given in the dotted boxes.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
