 Correction for 'Solution growth and thermal treatment of crystals lead to two new forms of 2-((2,6-dimethylphenyl)amino)benzoic acid' by Rong Hu *et al.*, *RSC Adv.*, 2018, 8, 15459–15470.

The new form, *i.e.* form II of 2-((2,6-dimethylphenyl)amino)benzoic acid identified in the original article is the same form as the one reported by V. Dokorou *et al.*<sup>1</sup> The crystal structure reported by Dokorou is incorrect as they mistakenly doubled the unit cell, leading us to believe we were reporting a new form.

The recently published Comment article<sup>2</sup> highlights our error in reporting form II as new.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
