## Correction: Strongly coloured thiocyanate frameworks with perovskite-analogue structures

Matthew J. Cliffe,<sup>\*a</sup> Evan N. Keyzer,<sup>a</sup> Matthew T. Dunstan,<sup>a</sup> Shahab Ahmad,<sup>b</sup> Michael F. L. De Volder,<sup>b</sup> Felix Deschler,<sup>c</sup> Andrew J. Morris<sup>d</sup> and Clare P. Grey<sup>\*a</sup>

Correction for 'Strongly coloured thiocyanate frameworks with perovskite-analogue structures' by Matthew J. Cliffe *et al.*, *Chem. Sci.*, 2019, **10**, 793–801, DOI: 10.1039/C8SC04082F.

The figure caption for Fig. 1c contains a minor typographical error. The corrected caption for Fig. 1 is outlined below.

**Fig. 1** Crystal structure of  $\text{Fe}[\text{Bi}(\text{SCN})_6]$  in (a) ORTEP and (b) polyhedral representations. Atoms are coloured as follows Bi, purple; Fe, brown; S, yellow; C, black and N, blue. (c) The periodic table coloured by whether the homoleptic metal hexathiocyanate anion is known. If  $[\text{M}(\text{NCS})_6]^{n-}$  is known in the CSD or ICSD structural database, the element is coloured indigo, if  $[\text{M}(\text{SCN})_6]^{n-}$  is known, it is coloured orange, if both are known, it is coloured green.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
