## Correction: Surface enhanced Raman scattering for the multiplexed detection of pathogenic microorganisms: towards point-of-use applications

Matthew E. Berry, Hayleigh Kearns, Duncan Graham and Karen Faulds\*

DOI: 10.1039/d1an90082j rsc.li/analyst

Correction for 'Surface enhanced Raman scattering for the multiplexed detection of pathogenic microorganisms: towards point-of-use applications' by Matthew E. Berry et al., Analyst, 2021, DOI: 10.1039/D1AN00865J.

The authors regret that an incorrect version of Table 1 was included in the original article. The correct version of Table 1 is presented below.

Correction **Analyst** 

 Table 1
 A summary of the general approaches and studies discussed within this review

SERS approach	Summary	Performance
(1) Label-free detection	<ul> <li>SERS substrates for the capture of pathogens.</li> <li>Intrinsic vibrational fingerprint of pathogens detected (no Raman reporters used).</li> </ul>	<ul> <li>Detection of three Gram negative bacterial strains (LOD 10<sup>5</sup> CFU mL<sup>-1</sup>).<sup>50</sup></li> <li>Detection of <i>E. coli</i> and <i>S. aureus</i> in tap water and milk (LOD 10<sup>3</sup> CFU mL<sup>-1</sup>, 10 min).<sup>51</sup></li> <li>Detection of multiple bacterial strains (LOD 1 CFU mL<sup>-1</sup>, 5 min).<sup>52</sup></li> <li>Detection of bacterial strains in mung bean sprouts (LOD 10<sup>2</sup> CFU mL<sup>-1</sup>, 4 hours).<sup>53</sup></li> <li>Sampling and detection of bacterial pathogens from skin wound (LOD 10<sup>6</sup> CFU mL<sup>-1</sup>, 8 hours (5 min for sampling)).<sup>99</sup></li> <li>Detection of meningitis pathogens in clinical CSF.<sup>103</sup></li> </ul>
(2) Microfluidics	<ul> <li>Sample preparation, reaction, separation and detection integrated into a single device.</li> <li>Supports label-free and label-based detection.</li> </ul>	<ul> <li>Label-free detection of <i>E. coli</i> and <i>S. aureus</i> in blood (LOD 10<sup>5</sup> CFU mL<sup>-1</sup>, 100 CFU mL<sup>-1</sup> in culture).<sup>57</sup></li> <li>Label-free detection of three bacterial strains in serum (LOD 4 CFU mL<sup>-1</sup>, 15 min).<sup>59</sup></li> <li>Label-based detection of <i>S. enterica</i> and <i>N. lactamica</i> using DEP enrichment (LOD 70 CFU mL<sup>-1</sup>, 10 min).<sup>61</sup></li> <li>Label-based detection of three bacterial pathogens at millilitre scale in blood (LOD &lt;100 CFU mL<sup>-1</sup>, 13 min).<sup>63</sup></li> <li>Label-based detection of <i>E. coli</i> using DEP enrichment (LOD 1 CFU mL<sup>-1</sup>).<sup>65</sup></li> <li>Detection of eight foodborne pathogens.<sup>98</sup></li> <li>Label-free detection of multiple viral strains in clinical nasopharyngea swabs.<sup>106</sup></li> </ul>
(3) Nucleic acid-based detection	Coupling of assays for the detection of pathogenic DNA with SERS substrates.     SERS nanotags functionalised with DNA/RNA aptamers.     Supports label-based detection.	<ul> <li>Detection of meningitis pathogenic DNA (LOD in pM range).<sup>72</sup> Detection of pathogen DNA in clinical CSF.<sup>73</sup></li> <li>Detection of KSHV and BA DNA using LFA (LOD in fM range).<sup>74</sup></li> <li>Detection of <i>S. aureus</i> and <i>S. typhimurium</i> using aptamer-based magnetic sandwich assay (LOD 15 CFU mL<sup>-1</sup>).<sup>78</sup></li> <li>Detection of <i>E. coli</i> and <i>S. aureus</i> using aptamer-based magnetic sandwich assay in urine samples (LOD 50 CFU mL<sup>-1</sup>, 1.5 hours, 20 CFU mL<sup>-1</sup> and 15 min for culture).<sup>79</sup></li> <li>Detection of <i>E. coli</i> using aptamers in beef samples (LOD 100 CFU mL<sup>-1</sup>, 20 min).<sup>81</sup></li> <li>Detection of influenzae A H1N1 in complex mixtures (LOD 97 pfu mL<sup>-1</sup>, 20 min).<sup>82</sup></li> <li>Detection of DNA from 11 common RTI pathogens using LFA (LOD in fM range, 20 min). Detection from throat swab.<sup>110</sup></li> <li>Detection of <i>S. enterica</i> and <i>L. monocytogenes</i> in milk, chicken and bee using LFA and RPA (LOD 22 CFU mL<sup>-1</sup>).<sup>111</sup></li> <li>Detection of plant pathogens on commercial crops using RPA outside of laboratory.<sup>114</sup></li> <li>Real time detection of MRSA genes using miniaturized PCR system.<sup>115</sup></li> </ul>
(4) Immunoassays	<ul> <li>Specific binding of pathogen antigen and antibodies coupled with SERS nanotags.</li> <li>Supports label-based detection.</li> </ul>	<ul> <li>Detection of Zika and dengue biomarkers using dipstick immunoassay (LOD 0.72 ng mL<sup>-1</sup>).<sup>86</sup></li> <li>Detection of multiple viral strains using magnetic LFA (LOD 10 pfu mL<sup>-1</sup>).<sup>89</sup> Detection in blood, serum and sputum (LOD 10<sup>5</sup> pfu mL<sup>-1</sup>).</li> <li>Detection of three bacterial pathogens using magnetic sandwich assay (LOD 10 CFU mL<sup>-1</sup>).<sup>90</sup> Same LODs confirmed on portable system (1 hour).<sup>108</sup></li> <li>Detection of multiple viral and bacterial pathogens in serum using magnetic sandwich assay (LOD 10 pg mL<sup>-1</sup>).<sup>91</sup></li> </ul>

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
