The authors regret that an incorrect version of Fig. 2 was included in the original article, where the structure of Sulfofin in Fig. 2D was incorrectly shown. The correct version of Fig. 2 is presented below.

**Fig. 2** The structures of representative well-characterized electrophilic fragments identified from target-based screening strategies in recent years. (A) KRAS-G12C allele-specific covalent fragment (6H05) identified from tethering screen, which was further elaborated to compound 12.<sup>31</sup> This inspired numerous groups to develop further optimized inhibitors, within which AMG510<sup>35</sup> and MRTX849<sup>36</sup> successfully entered clinical trials. (B) Compound 5 targets the active cysteine (C885) of HOIP.<sup>37</sup> (C) OTUB2-COV-1 targets the active cysteine (C51) of OTUB2 and NUDT7-COV-1 target C73 of NUDT7.<sup>38</sup> (D) Sulfopin targets the active cysteine of Pin1 (C113).<sup>39</sup> (E) Representative covalent fragment scaffolds target the active cysteine (C145) of SARS-COV-2 main protease (Mpro).<sup>40</sup>

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
