Correction for 'Temperature dependence of anomalous protonic and superprotonic transport properties in mixed salts based on CsH<sub>2</sub>PO<sub>4</sub>' by Andreu Andrio et al., *Phys. Chem. Chem. Phys.*, 2019, **21**, 12948–12960, DOI: 10.1039/C8CP07472K.

The authors would like to correct eqn (12) in the published article.

The original eqn (12) for the number of charge carriers is shown as:

$$n(\alpha) = \frac{\sigma_{dc} L^2 \omega_{\max}^{\tan \delta}}{4kTM^{1+\frac{1}{2\alpha}}}$$

However, the correct expression for the number of charge carriers is:

$$n(\alpha) = \frac{\sigma_{dc}}{q^2} \left( \frac{L^2 \omega_{\max}^{\tan \delta}}{4kTM^{1+\frac{1}{2\alpha}}} \right)^{-1}$$

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
