Correction: Yulangsans polysaccharide improves redox homeostasis and immune impairment in D-galactose-induced mimetic aging

Van Minh Doan,^a Chunxia Chen,^{a,b} Xing Lin,^a Van Phuc Nguyen,^a Zhihuan Nong,^a Weisi Li,^a Qingquan Chen,^a Jianjun Ming,^a Qiuqiao Xie^a and Renbin Huang^{*a}

Correction for 'Yulangsans polysaccharide improves redox homeostasis and immune impairment in D-galactose-induced mimetic aging' by Van Minh Doan *et al.*, *Food Funct.*, 2015, **6**, 1712–1718, DOI: 10.1039/C5FO00238A.

There was an error in Fig. 3 in this manuscript. The same image was mistakenly presented for p21 in both the liver and brain. The authors have rescanned all of the original bands used to generate Fig. 3 and the corrected figure is shown below. This error does not affect the conclusions of the paper.

Fig. 3 Effect of YLSP on the expression of p53 and p21 in the liver and brain of aging mice induced with D-galactose. The relative protein level between the tested target protein and internal standard β-actin was calculated and labeled on the Y axis. The data values are expressed as the mean ± SE, (n = 10). ^aP < 0.05 compared to the normal control group. ^bP < 0.05 compared to the D-gal model group. The bands are from a representative blot. Lane-1: normal control group; lane-2: D-gal-treated control group; lane-3: 0.2 g kg⁻¹ vit-treated group; lane-4: 0.6 g kg⁻¹ YLSP-treated group.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
