The presented research was funded primarily by the Ames Laboratory Directed Research and Development (LDRD) program. NMR characterization was supported by the U.S. Department of Energy (DOE) Office of Science, Basic Energy Sciences, Materials Science and Engineering Division. Ames Laboratory is operated for the U.S. DOE by Iowa State University of Science and Technology under Contract No. DE-AC02-07CH11358. Clemson University's contributions were supported by the National Science Foundation *via* EPSCoR OIA-1655740. We thank Dr V. K. Pecharsky, Ames Laboratory, for reading the manuscript and providing valuable feedback.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
