Correction for 'Synthesis and biological evaluation of hybrids from farnesylthiosalicylic acid and hydroxycinnamic acid with dual inhibitory activities of Ras-related signaling and phosphorylated NF- κ B' by Yong Ling *et al.*, *Org. Biomol. Chem.*, 2014, **12**, 4517–4530, DOI: 10.1039/C4OB00023D.

The authors regret that there was an incorrect western blot image shown in Fig. 6A representing the Akt group. The correct Fig. 6 is shown below.

Fig. 6 Immunoblot analysis of the expression and phosphorylation of the Ras-related signal events *in vitro*. (A) SMMC-7721 cells were treated with the vehicle (control), different doses of 5f or FTS were homogenized, and their lysates were subjected to immunoblot analysis using antiphospho-Raf (Ser259), antiphospho-ERK1/2 (Thr202/Tyr204), anti-Akt, antiphospho-Akt (Ser473), anti-phospho-NF- κ B p65, anti-NF- κ B and anti- β -actin antibodies, respectively. β -Actin was used as the control. (B) Quantitative analysis. The relative levels of each signaling event to the control β -actin were determined by densitometric scanning. The data are expressed as means \pm SD from three duplicate experiments. * $P < 0.01$ vs. the control.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
