Correction for 'Unexpected formation of 1,2- and 1,4-bismethoxyl $Sc_3N@I_h-C_{80}$ derivatives *via* regioselective anion addition: an unambiguous structural identification and mechanism study' by Yajing Hu *et al.*, *Chem. Sci.*, 2021, DOI: 10.1039/d1sc01178b.

The authors regret a mistake in Fig. 3, showing the ¹³C NMR spectrum of product **1**. In the ¹³C NMR spectrum of **1**, the peaks corresponding to the sp³ carbons of the fullerene cage and the methoxy groups were wrongly identified. The correct version of Fig. 3 is shown below.

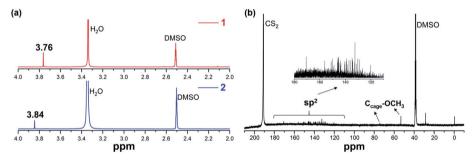

Fig. 3 (a) 1 H NMR spectra of 1 and 2 and (b) 13 C NMR spectrum of 1 recorded in CS₂ with DMSO- d_6 as the external lock solvent.

The description of the 13 C NMR spectrum in the Results and discussion section should therefore read: Resonance for the two sp 3 I_{h} -C $_{80}$ cage-carbons bonded to the OCH $_{3}$ groups appears at 74.49 ppm, while the peak for the two sp 3 OCH $_{3}$ carbons appears at 53.76 ppm.

The description of the ¹³C NMR results in the Experimental section should therefore read: 74.49 (2C, sp³, C_{cage}-OCH₃), 53.76 ppm (2C, sp³, -OCH₃).

These corrections do not influence any conclusions of the original paper.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
