Correction for 'Impact of changes in bond structure on ovonic threshold switching behaviour in GeSe2' by Jonas Keukelier et al., J. Mater. Chem. C, 2021, DOI: 10.1039/d0tc04086i.

In the published article, Table 4 contained an error in the row "Adding Sb": the entry "Se–Se↑" should have read "Se–Se↓". The corrected version of Table 4 is shown below:

Table 4 Summary of the impact of several (post)deposition processes on the bond presence and electrical parameters compared to as-deposited 35% Ge GeSe₂. Arrows indicate an increased or decreased presence of bonds

Process	Impact on bonds	Impact on electrical parameters
Annealing	Pure Ge-Ge & Se-Se↓	Lower $I_{\rm pris}$ and higher $V_{\rm FF}$
	Ge–Se↑	Leaky after FF
Increasing pressure	ETH Ge-Ge↑	Higher I_{pris} and lower V_{FF}
	Ge–Se↓	Minimal impact on $V_{\rm th}$
Adding Sb	Se–Se↓	Higher I_{pris} and lower V_{FF}
	Se–Sb & Sb–Sb↑	Large variability
Adding N	Ge–Ge & Ge–Se↓	Lower I_{pris} and higher V_{FF}
	Se–Se↑	Leaky after FF
Co-doping Sb + N	Ge–Ge & Se–Se↓	Similar I_{pris} and lower V_{th}
	Sb-N↑	Better stability

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
