## Correction: Redox-active ligand based Mn(I)-catalyst for hydrosilylative ester reduction

Soumi Chakraborty, Arpan Das and Swadhin K. Mandal\*

Correction for 'Redox-active ligand based Mn(I)-catalyst for hydrosilylative ester reduction' by Soumi Chakraborty *et al.*, *Chem. Commun.*, 2021, **57**, 12671–12674, DOI: 10.1039/D1CC05614J.

The authors regret that there was a minor factual error in the two sentences beginning, "During recent years . . .", on lines 4–9 of the right column of the first page of the article. These two sentences should be replaced by the following corrected text:

"In addition, a few Mn-complexes were reported for silylative reduction of esters to alcohol although the mechanism was not well-explored.<sup>23–26</sup> Except for a very recent report by Royo and coworkers,<sup>26</sup> earlier protocols<sup>11,17–18,23–25</sup> demanded the use of costly silanes such as phenylsilane and phosphine-based ligands, which are comparatively expensive and prone to degradation.<sup>27</sup>"

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
