Correction: Local reaction environment for selective electroreduction of carbon monoxide

Ming Ma,^{*ab} Wanyu Deng,^b Aoni Xu,^b Degenhart Hochfilzer,^b Yu Qiao,^b Karen Chan,^{*b} Ib Chorkendorff^b and Brian Seger^{*b}

Correction for 'Local reaction environment for selective electroreduction of carbon monoxide' by Ming Ma *et al.*, *Energy Environ. Sci.*, 2022, <https://doi.org/10.1039/d1ee03838a>.

In our work we discussed that the key step for acetate formation should occur near the cathode surface, which was based on ref. 10. During the analysis we became aware of the theoretical effort by Heenen *et al.*¹ that hypothesized this key step was a solution reaction in Scheme S1 (ESI, ref. 7). While we cited this work in the supplementary information, we failed to acknowledge the work from Heenen *et al.* in the main text and feel this needs to be corrected.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
