**Fig. 7** Antiadipogenic effects of APS and its potential mechanisms in 3T3-L1 cells. Panel A. Effect of APS1 and APS2 on cell viability in 3T3-L1 cells, panel B and C. Antiadipogenic effects of APS1 and APS2 by measuring Oil Red O (ORO) staining of intracellular lipid accumulation in 3T3-L1 cells. Panel D. Regulation of adipogenic-specific genes expression by APS1 and APS2 (100 µg mL<sup>-1</sup>) in 3T3-L1 cells. All values (mean ± SEM) were obtained from three independent experiments. Asterisks indicate significant differences from the control (one-way ANOVA, \*  $P < 0.05$ , \*\*  $P < 0.01$ , \*\*\*  $P < 0.001$ , \*\*\*\*  $P < 0.0001$ ).

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
