Correction for 'Enhanced production of phenol and debromination by co-pyrolysis of the non-metallic fraction of printed circuit boards and waste tires' by Chuan Ma *et al.*, *Green Chem.*, 2021, **23**, 6392–6404, DOI: 10.1039/D1GC01176F.

Tables 1 and 2 in the originally published manuscript contained small typographical errors that do not impact the main conclusions of the manuscript. In Table 1, the percentage of volatile matter for PCB should be 35 and 5 for fixed carbon. The ordering of samples in Table 2 was also incorrect and should have been listed as PCB, PCB1WT3, PCB1WT1, PCB3WT1 and WT.

Corrected versions of Table 1 and 2 are given here and replace those in the original manuscript.

**Table 1** Properties of the PCB and WT samples

	PCB	WT
Proximate analysis (wt%)		
Moisture	0	0
Volatile matter	35.0	62.4
Fixed carbon	5.0	30.3
Ash	60	7.3
Ultimate analysis <sup>b</sup> (wt%)		
C	59.5	89.3
H	5.6	7.5
N	1.7	0.6
S	— <sup>a</sup>	1.7
Br	18.5	—
O <sup>c</sup>	14.8	0.9

<sup>a</sup> Not detected. <sup>b</sup> Dry ash free basis. <sup>c</sup> By difference.
