Correction: Protected lignin biorefining through cyclic extraction: gaining fundamental insights into the tuneable properties of lignin by chemometrics

Maria Karlsson,*[a,b] Vijaya Lakshmi Vegunta,[b] Raghu Deshpande[b] and Martin Lawoko*[a,b]

DOI: 10.1039/d2gc90019j

rsc.li/greenchem

Correction for 'Protected lignin biorefining through cyclic extraction: gaining fundamental insights into the tuneable properties of lignin by chemometrics' by Maria Karlsson *et al.*, *Green Chem.*, 2022, **24**, 1211–1223, DOI: 10.1039/D1GC04171A.

Errors occurred during the processing of the final manuscript which resulted in lower resolution images, a portion of Fig. 6 not being displayed correctly and the equation for the expanded *E*-factor, specific to the process reported in the original manuscript, being incorrect.

This Correction contains the intended full Fig. 6 and the correct *E*-factor equation.

Fig. 6 should be as shown here.

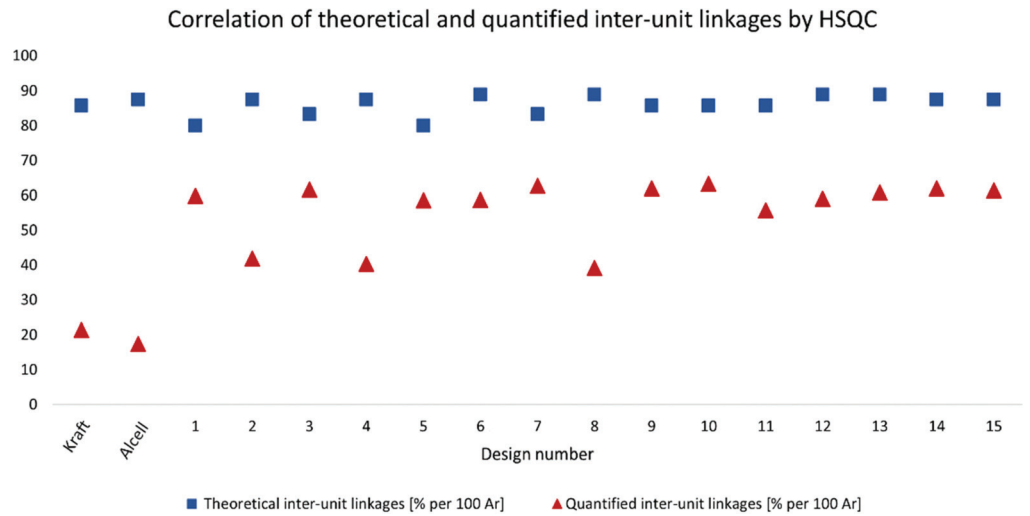

Fig. 6 Theoretical and quantified inter-unit linkages analysed by HSQC NMR, presented as inter-unit linkages per 100 aromatic rings.

The second equation referring to *E*-factor should be as follows:

$$E-\text{Factor}=((\text{mass wood meal}+\text{mass of ethanol}+\text{mass of acid})-(\text{mass of hemicellulose}+\text{mass of lignin}+\text{mass of fibre residue 2}+\text{mass of recovered ethanol}))/(\text{mass of hemicellulose}+\text{mass of lignin}+\text{mass of fibre residue 2}+\text{mass of recovered ethanol})$$

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
