Correction: Protected lignin biorefining through cyclic extraction: gaining fundamental insights into the tuneable properties of lignin by chemometrics

Maria Karlsson, *a,b Vijaya Lakshmi Vegunta,b Raghu Deshpandeb and Martin Lawoko*a,b

DOI: 10.1039/d2gc90019j rsc.li/greenchem

Correction for 'Protected lignin biorefining through cyclic extraction: gaining fundamental insights into the tuneable properties of lignin by chemometrics' by Maria Karlsson et al., Green Chem., 2022, 24, 1211-1223. DOI: 10.1039/D1GC04171A.

Errors occurred during the processing of the final manuscript which resulted in lower resolution images, a portion of Fig. 6 not being displayed correctly and the equation for the expanded E-factor, specific to the process reported in the original manuscript, being incorrect.

This Correction contains the intended full Fig. 6 and the correct *E*-factor equation. Fig. 6 should be as shown here.

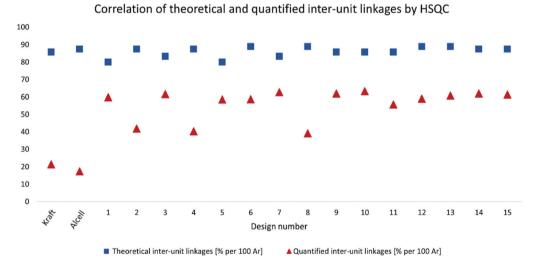

Fig. 6 Theoretical and quantified inter-unit linkages analysed by HSQC NMR, presented as inter-unit linkages per 100 aromatic rings.

bDivision of Wood Chemistry and Pulp Technology, Department of Fiber and Polymer Technology, School of Engineering Sciences in Chemistry, Biotechnology and Health, Royal Institute of Technology, KTH Teknikringen 56-58, 100 44 Stockholm, Sweden

The second equation referring to *E*-factor should be as follows:

Green Chemistry

 $E-Factor = ((mass\,wood\,meal+mass\,of\,ethanol+\,mass\,of\,acid) - (mass\,of\,hemicellulose+mass\,of\,lignin\\ + \,mass\,of\,fibre\,\,residue\,2 + mass\,of\,\,recovered\,ethanol))/(mass\,of\,hemicellulose+mass\,of\,lignin+mass\,of\,fibre\,\,residue\,2\\ + \,mass\,of\,\,recovered\,ethanol)$

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
