The authors regret that an incorrect version of Table 3 was included in the original article. The correct version is given here:

**Table 3** EV recoveries  $R_{EV}$ , dye recoveries in the EV fractions  $R_{dye}$ , and relative purification efficiencies  $E_{rp}$  for the labelled and purified EVs. The removal of unbound dye was studied with ultracentrifugation (UC), ultracentrifugation with density gradient without ultrafiltration (UCG), ultrafiltration (UF), size-exclusion chromatography (SEC), and anion exchange chromatography (AEC). The individual values for each replicate are presented in ESI Table S2

<sup>a</sup> † – acceptably high; ‡ – unacceptably low; all other values are acceptable with caution. <sup>b</sup>  $E_{rp} > 1$  indicates successful separation of the labelled EVs from the unbound dye: the greater  $E_{rp}$ , the better separation; conversely,  $E_{rp} < 1$  indicates unsuccessful removal of the dye.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
